

European Marine Data Exchange

Dick M.A. Schaap – MARIS (Netherlands)
Technical coordinator SeaDataCloud, ODIP, EMODnet HRSM,
EMODnet Chemistry, and EMODnet Ingestion

SDB Day, Herrsching - Germany, 6 June 2018

Oceans and seas are important

Climate, Energy, Food, Tourism, Shipping, Health,

Marine data relevant for many uses:

- Scientific Research to gain knowledge and insight
- Monitoring and assessment (water quality, climate status, stock assessment)
- Coastal Zone Management
- Modelling (including hindcast, now-cast, forecast)
- Dimensioning and supporting operations and activities at sea (shipping, offshore industry, dredging industry, ..)
- Implementation and execution of marine conventions for protection of the seas
- Implementation of international Directives, such as in Europe directives for water (WFD), marine strategy (MSFD), coastal zone management

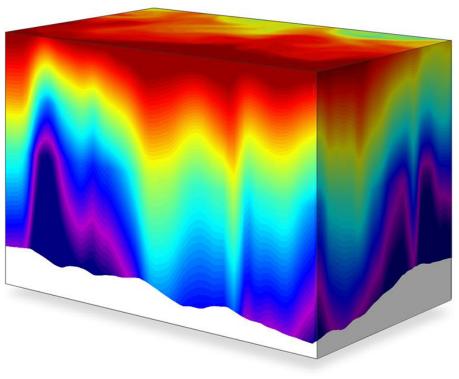

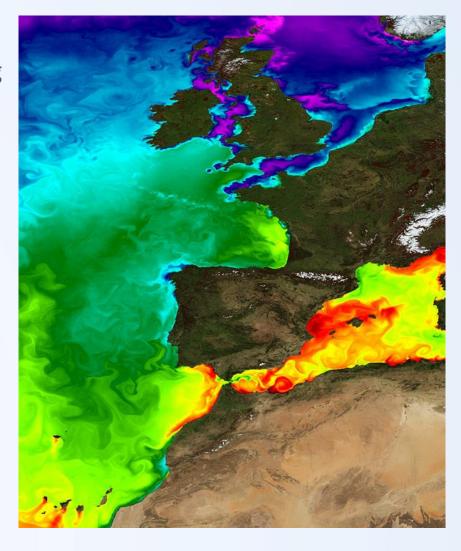

Users originate from government, science sector, and industry, nationally and internationally

Input for models: analyses and forecasts:

- Operational oceanography
- Physical and meteorological modelling
- Ecosystem modelling

Acquisition of ocean and marine data

Economy of data acquisition

- Data are collected by governments, research institutes, and private industry (in Europe already more than 1.000 organisations)
- Data for physics, geophysics, meteorology, chemistry, biology, geology, bathymetry
- Acquisition of oceanographic and marine data is expensive; annual costs in Europe estimated at 1.4 Billion Euro (1.0 = in-situ; 0.4 = satellites)

Professional data management is required with agreements on standardisation, quality control protocols, long term archiving, catalogues, and access

What is SeaDataNet?

A pan-European infrastructure set up and operated for managing marine and ocean data in cooperation with the NODCs and data focal points of 34 countries bordering the European seas

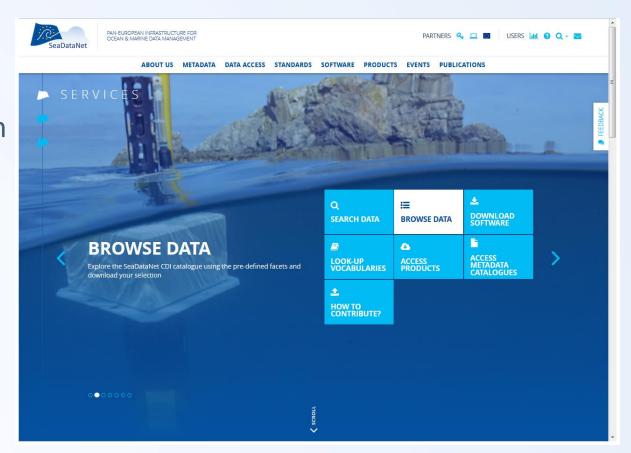

90s	Metadata directories Medar/MedAtlas		
2002-2005	Sea-Search (FP5)		
2006-2011	SeaDataNet (FP6)		
2011-2015	SeaDataNet II (FP7)		
2016-2020	SeaDataCloud (H2020)		

SeaDataNet portal

Giving access to

- Standards, tools both for data centres and other users
- Data and metadata
- Products

http://www.seadatanet.org

SeaDataNet standards

- Set of common standards for the marine domain, adapting ISO and OGC standards and achieving INSPIRE compliance
 - Adoption of ISO 19115 19139 standard for describing metadata on data sets, research cruises, monitoring networks, and research projects
 => marine metadata profiles, schemas, schematron rules
 - Controlled vocabularies for the marine domain (>65,000 terms in 82 lists), with international governance and web services
 - Standard data exchange formats: ODV ASCII and NetCDF (CF) fully supported by controlled vocabularies
- Maintenance and dissemination of standard QA-QC procedures, together with IOC/IODE and ICES

SeaDataNet services and tools

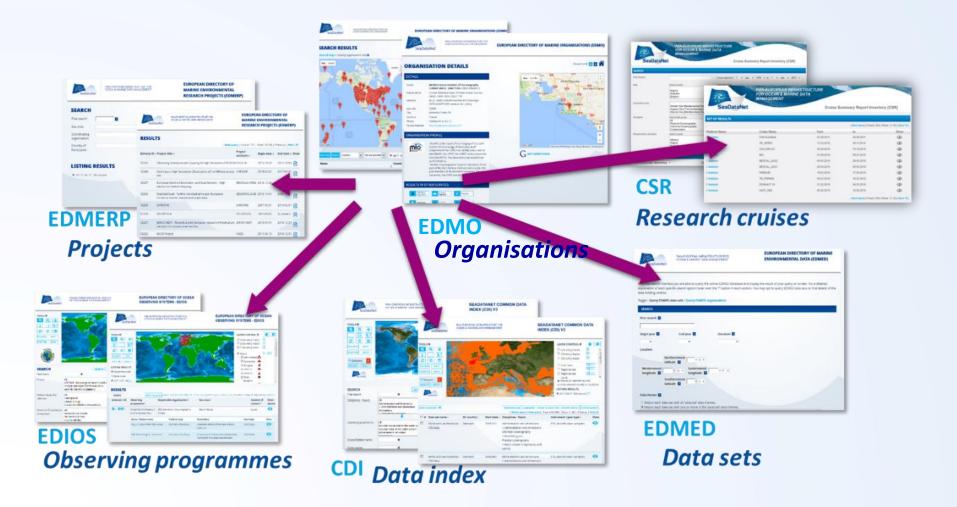

- **Set of tools** to be used each data centre and freely available from the SeaDataNet portal: metadata editor, data conversion software, data analysis software (ODV), data interpolation software (DIVA)
- Capacity building by training workshops for uptake of standards and tools by the data centres in order to achieve standardisation

- Pan-European services for harmonised discovery, access, visualisation of data and data products
- Common SeaDataNet Data Policy and License

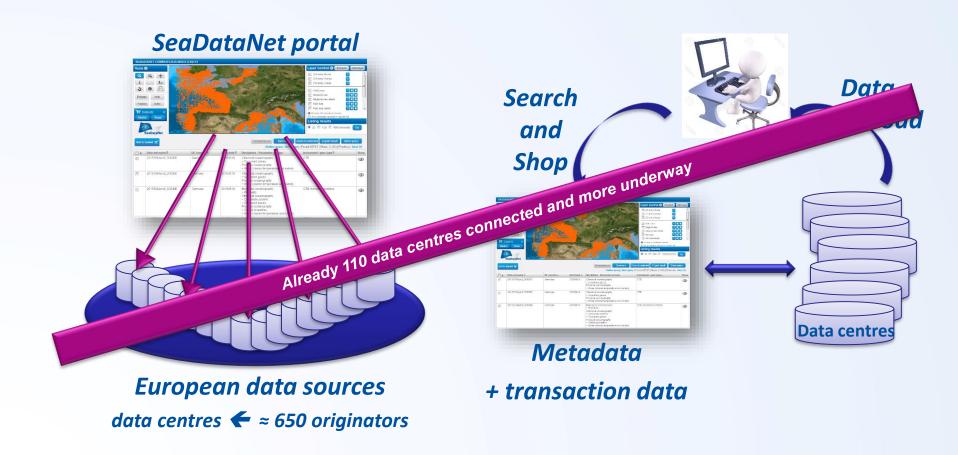

Pan-European metadata directories

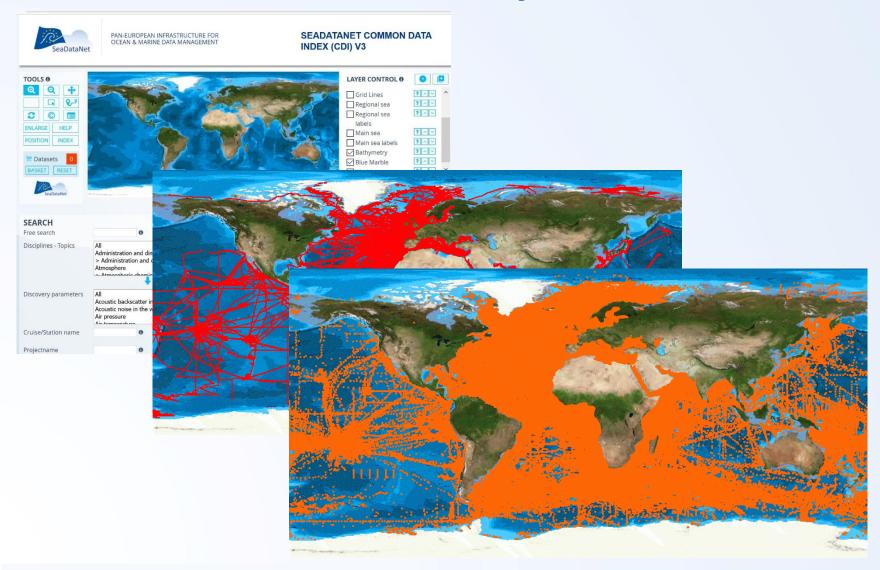

CDI Data Discovery and Access service

Data Products and viewers

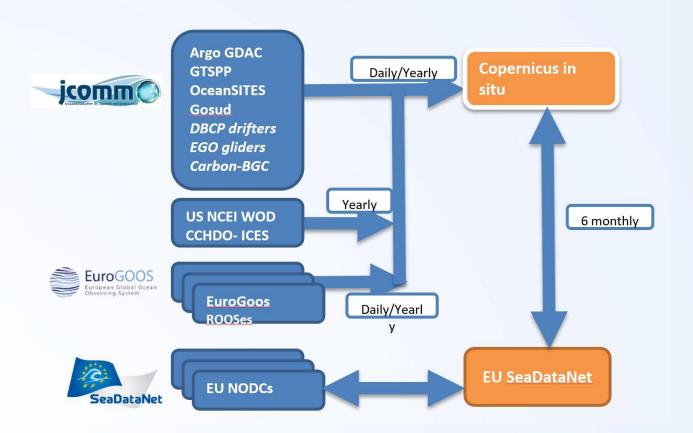

SeaDataNet cooperation

- Marine Strategy Framework Directive (MSFD): providing infrastructure,
 standards and data collections for several indicators
- Large ocean monitoring systems (EuroGOOS, AtlantOS, Euro-ARGO,
 JERICO-Next, ..): providing standards and validation + long-term archiving
 services
- GEOSS EuroGEOSS: Maintaining the GEOSS portal with SeaDataNet in-situ data collections from large community of European data holders
- Copernicus: Data exchange with Copernicus Marine Environmental Monitoring Services (CMEMS) and providing standards:

Cooperation SeaDataNet – Copernicus

Copernicus Marine Environmental Monitoring Services (CMEMS)

SeaDataNet providing long-term archives and standards

Ocean Data Interoperability Platform (ODIP - ODIP II)

- European-USA-Australia collaborative project
- Supported by:
 - European Commission
 - National Science Foundation (NSF)
 - Australian Government

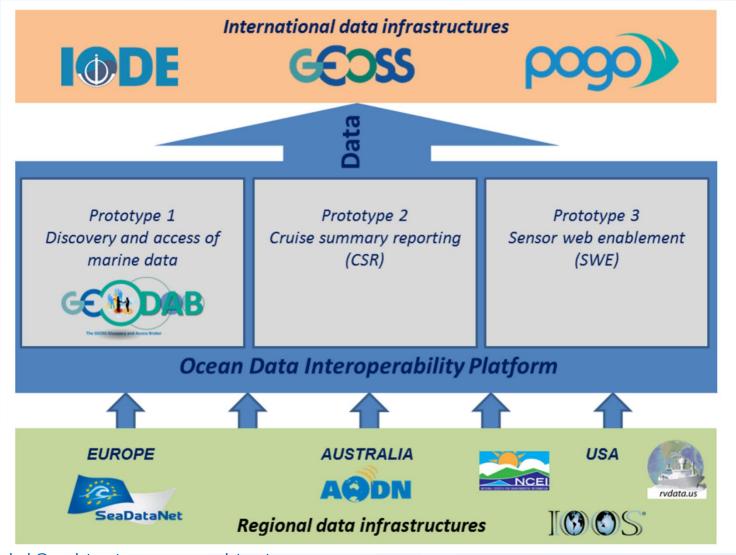

- Promoting the development of a common global framework for marine data management by developing interoperability between existing regional einfrastructures of Europe, USA and Australia and towards global infrastructures such as GEOSS, IOC-IODE and POGO.
- In practice by organising international workshops with leading experts to present, compare and discuss approaches and standards applied.
- Developing prototypes for interoperability solutions or common standards to overcome identified differences. Prototypes projects are worked out in order to evaluate and test solutions.

ODIP – Prototype projects

SeaDataCloud

SeaDataNet and EMODnet

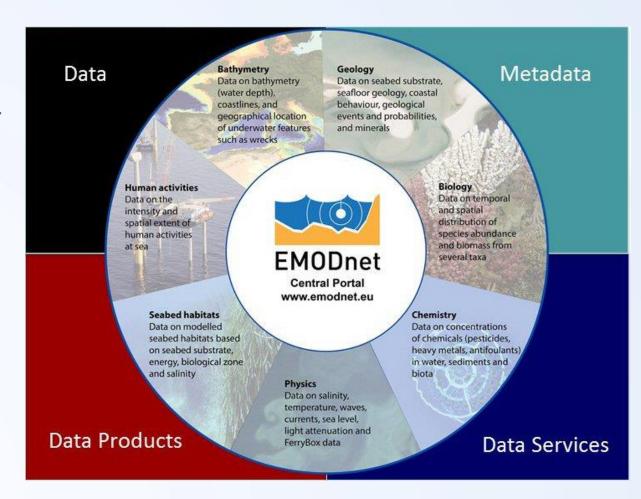

- EU initiative for an overarching European Marine Observation and Data Network (EMODNet) driven by Marine Knowledge 2020 and Blue Growth
- SeaDataNet qualified as a leading infrastructure for the EMODnet data management component and is driving several thematic portals from the start in 2008
- 'Bottom-up meets top-down'
- This synergy has resulted in many more data centres adopting SeaDataNet standards and connecting to the CDI Data Discovery and Access service while it gave a flying start to EMODnet

European Marine Observation and Data Network

- Central portal
- Thematic portals for physics, biology, geology, bathymetry, chemistry, seabed habitas and human activities
- Checkpoints for analysing fitness for purpose

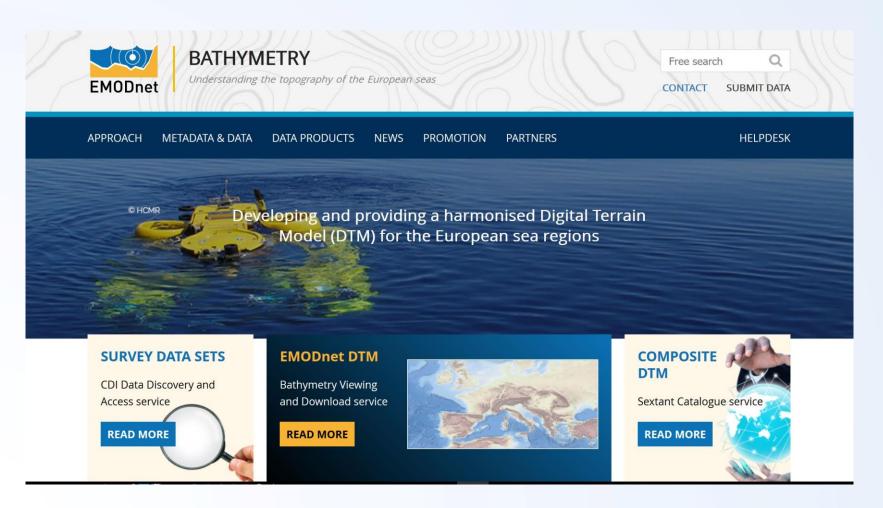

EMODnet thematic portals

Bathymetry	Geology	Seabed Habitats	Chemistry	Biology	Physics	Human activities
Minimum cell water depth	Seabed substrate	Data on modelled seabed habitats	Pesticides & Biocides	Biomass	Waves	Aggregate Extraction
Maximum cell	Sediment accumulation rate	(depth, seabed substrate, broad	Antifoulants	Abundance	Water temperature	Dredging
water depth	Sea-floor geology	scale biological zone, T, S, light,	Phamaceuticals	Gridded Abundance maps	Water salinity/conductivit	Fisheries
Average cell water depth	Seabed lithology	oxygen, energy due to waves & current)	Heavy Metals	species groups:	y/density	Hydrocarbon Extraction
Standard deviation	Stratigraphy	to waves a current,	Hydrocarbons	• phytoplankton	Currents	Main Ports
of cell water depth	Coastline	Broad-scale physical habitat	Radionuclides	• zooplankton	Light attenuation/ fluorescence	Mariculture
Number of values used for	migration	map	Fertilizers	angiosperms	Sea level	Ocean Energy Facilities
interpolation of cell water depth	Aggregate resources	Detailed habitat				Pipelines and
Horizontal		maps from surveys	Acidity	macro-algae	Atmospheric parameters	Cables
coordinate	Geological events	Individual habitat modelling outputs	Dissolved Gasses	 invertebrate bottom fauna 	Wind	Protected Areas
reference system		Habitat point data	Plastics	• birds	Underwater noise	Waste Disposal

SeaDataNet, pan-European marine data management infrastructure and network of NODCs

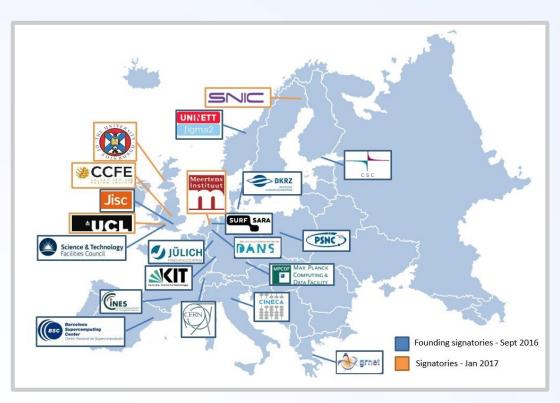

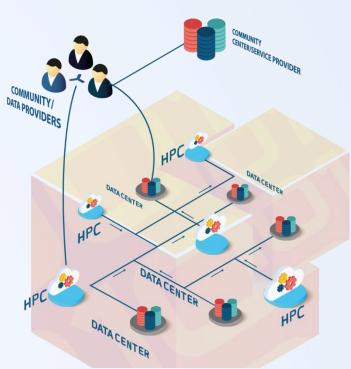

SeaDataCloud a new opportunity

- Standards and information technology are always evolving, there is a move towards cloud storage and cloud computing, and the SeaDataNet infrastructure must stay up-to-date to maintain and further expand its services to its leads customers and major stakeholders
- SeaDataCloud project, started Nov 2016 with 4 year run and 10 Meuro funding
- A strategic and operational cooperation between the SeaDataNet consortium of marine and ocean data centres and the EUDAT consortium of e-infrastructure service providers

Cooperation with EUDAT

EUDAT is European consortium of academic computing centres

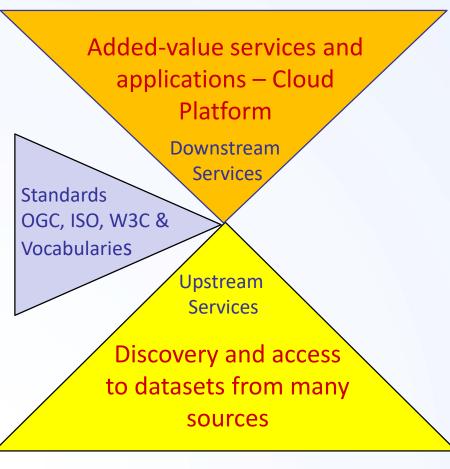

What is it about?

- SDC is about updating and further developing standards
- SDC is about improving and innovating services & products
- SDC is about adopting and elaborating new technologies
- SDC is about giving more attention to users and putting the user experience in a central position
- SDC is also about developing a Virtual Research Environment (VRE) bringing data and applications together in the cloud and serving users

Towards a Blue Cloud as blue print for the European Open Science Cloud (EOSC)

- Cloud platform with common services for data pre-processing, analyses, visualizations, publishing, DOIs...
- Applying common standards and interoperability solutions for providing harmonised data and metadata
- Providing harmonised discovery and access to data output from multiple sources, European and international

EMODnet Ingestion – wake up your data

Home

Welcome to the EMODnet Data Ingestion portal

The European Marine Observation and Data Network (EMODnet) consists of more than 160 organisations that together work on assembling, harmonising and making marine data, products and metadata more available to public and private users. This Data Ingestion portal facilitates additional data managers to ingest their marine datasets for further processing, publishing as open data and contributing to applications for society.

EMODNET INGESTION

Submit your data files

The online Data Submission service facilitates you to submit marine datasets by completing a form and

Ingest operational data

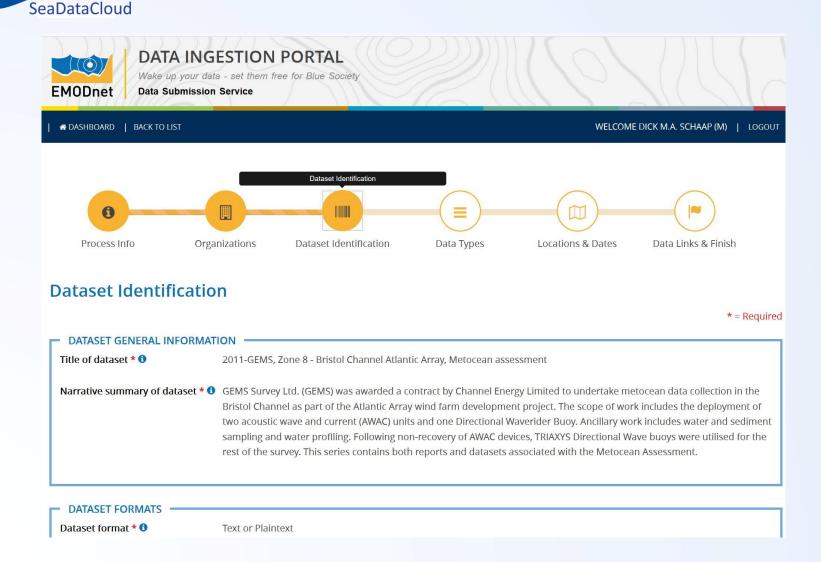

We are also interested in (Near) Real-Time ((N)RT) data streams from fixed and autonomous ocean

View submissions

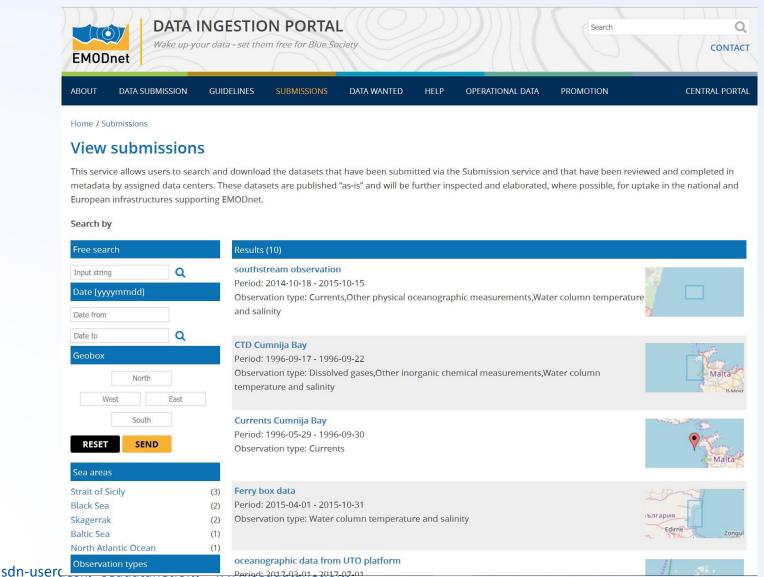

View, search and download datasets that have been submitted by data providers using the Data

Submission service for offline data sets

View submissions service 'as is'

Uptake of ingested data sets by European infrastructure
