

Satellitengestützte Dienste für die maritime Wirtschaft

MARSAT

Satellite services and geospatial infrastructures for maritime industry

Knut Hartmann, MARSAT coordinator

und Energie

# Maritime Industry

## Relevance in Germany:

70 Mrd € turnover

400,000 jobs

## Topics:

Safe Navigation

Route optimization

Coastal engineering

Coastal zone management

Environmental Impact Studies

...

## Challenge

- Maritime industry aims to get more effective (costs, time and risks)
- Industry 4.0 concepts are becoming more and more relevant
  - Access digital data and operational information flows for decision making and management

- Satellite sensors, data and derived information are significantly increasing over the last years and in future – Era of Earth Observation –
- Value added information are relevant to the maritime industry but require integration into user's workflows.

A stylized, colorful map of Europe and Africa is shown on the left side of the slide. The map uses a palette of green, yellow, orange, and blue, with white outlines for coastlines and major rivers. The background of the slide is a dark purple gradient with some faint, light-colored circular patterns.

## About MARSAT

- Aims to develop innovative solutions to bring satellite big data and value adds to the maritime market to increase efficiency and safety of navigation
  - 2.5 year R&D project co-funded by the German government
    - Teaming of 4 SME's and 1 research organisation

# MARSAT's partner & network

- Maritime solution providers & integrators

- EO satellite data & service providers

- Applications & Economical suitability
  - **Integration** into user environments
  - Information access, harmonization
  - Distributed IT and data platforms
- 
- Range of relevant space **EO products and services**
    - EO data and product access
      - Value adding processes: Automation and cost reductions

# MARSAT approach

EO-Ressourcen

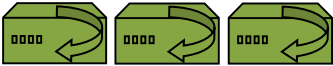

Supplementary data  
e.g. AIS, models,  
3rd party services

Application  
Integration

Interfaces  
Distributed IT infrastructures & data

  
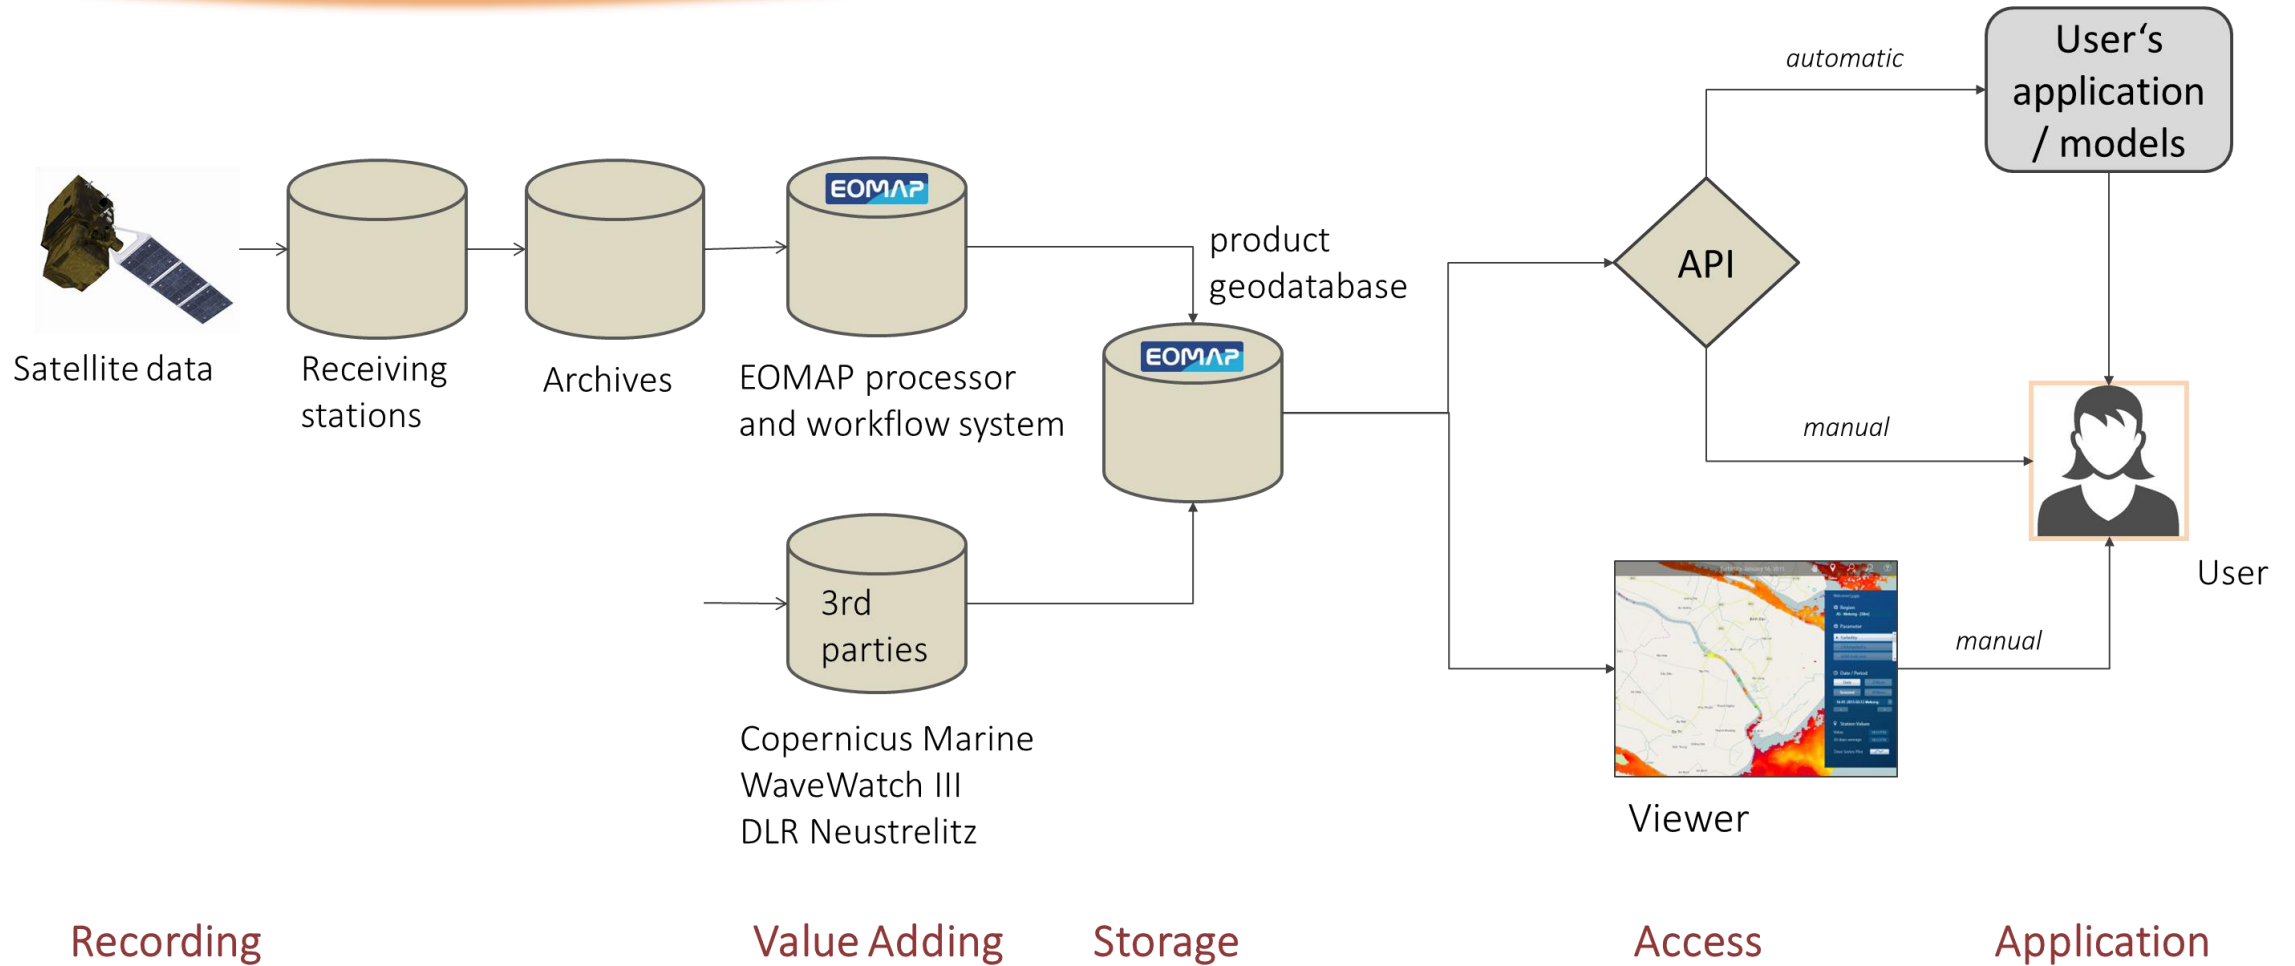

Value adding processes

Use Case  
Identification of floating objects

Report of Trimaran wreck  
2018-03-15

Use Case  
Navigation in higher latitudes

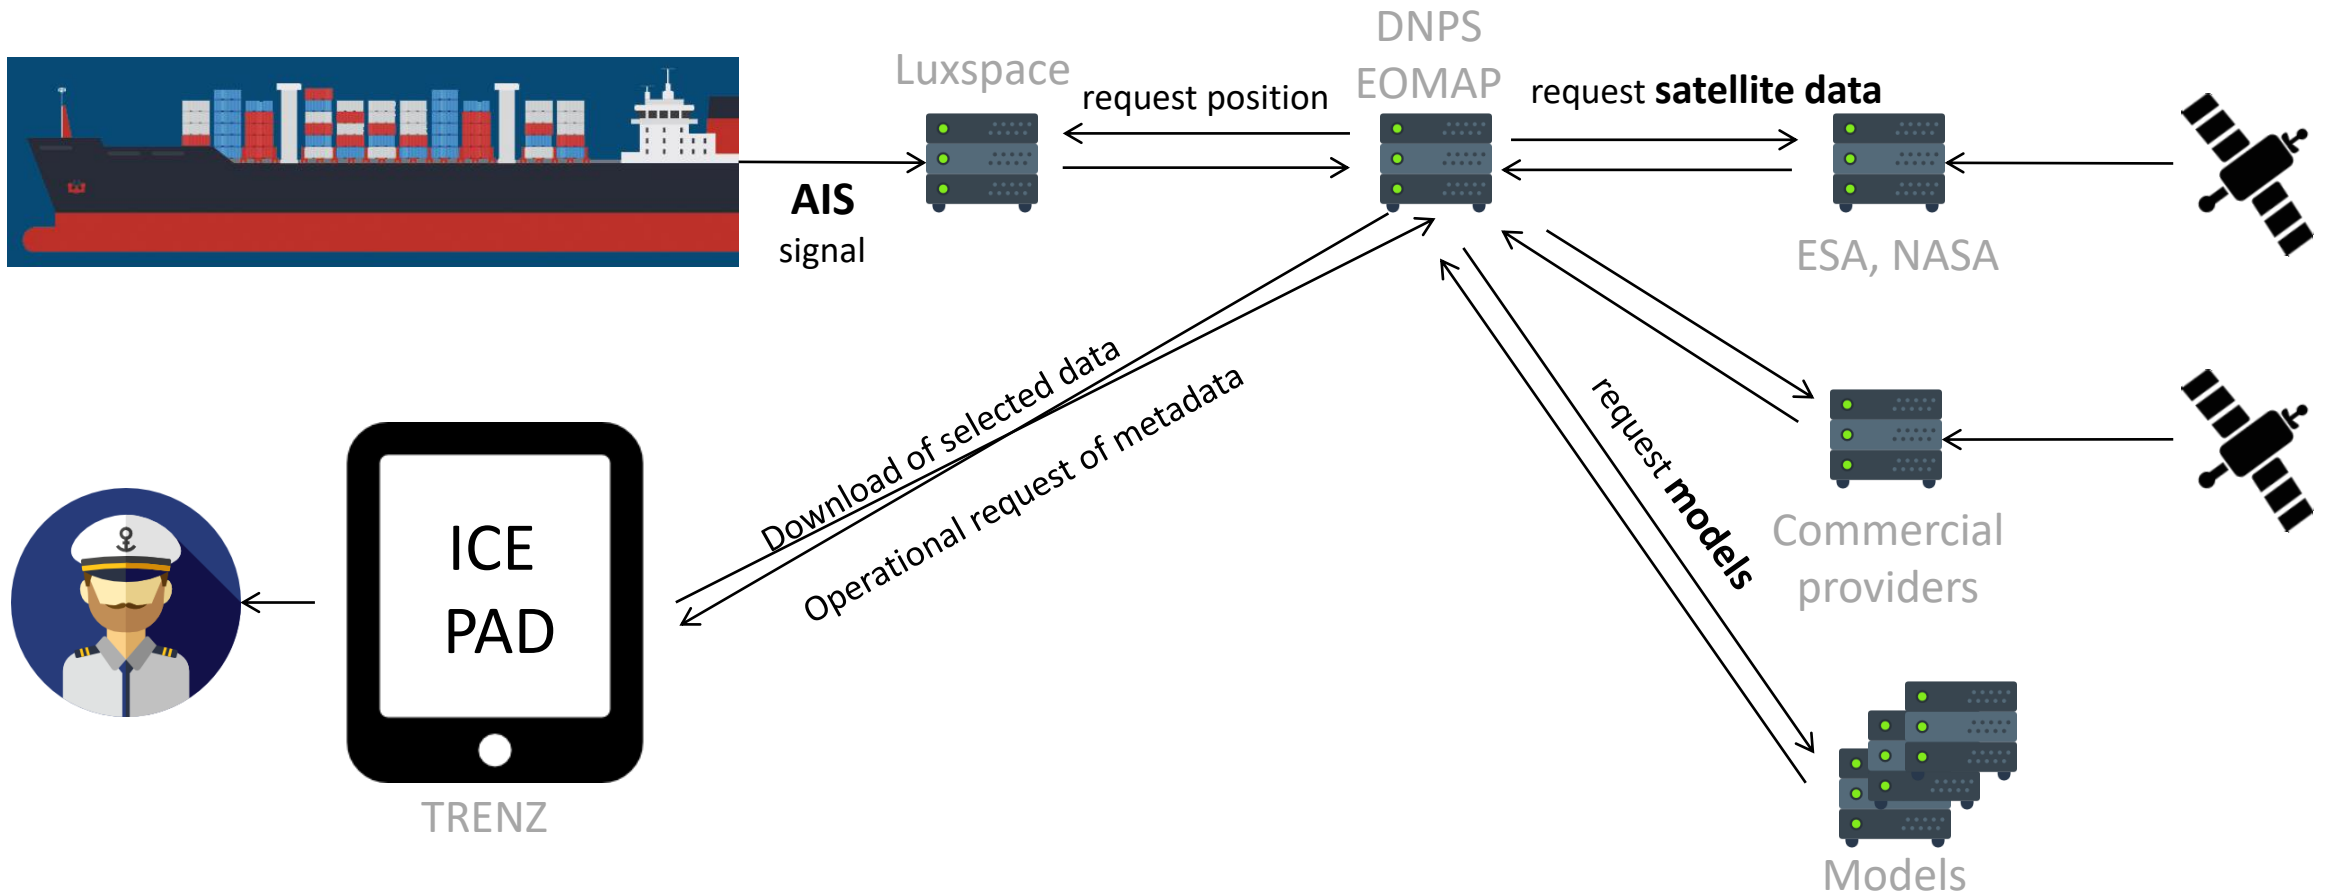

An aerial photograph of a vast sea ice field. The ice consists of numerous small, irregular floes of varying sizes, some appearing as white patches and others as translucent blue. The water between the floes is a deep, dark blue. In the background, a range of dark, rugged mountains stretches across the horizon under a sky filled with soft, white clouds.

Bringing most recent information on ice coverage to ships in higher latitude to support voyage planning and tactical navigation.

International Code for Ships Operating in Polar Waters (Polar code) 2017 forced to have up to date ice information on board.

### **Challenge**

- Limited bandwidth
- Requirement to have ready-to-use information

Use Case  
Satellite Derived Bathymetry for bENCs

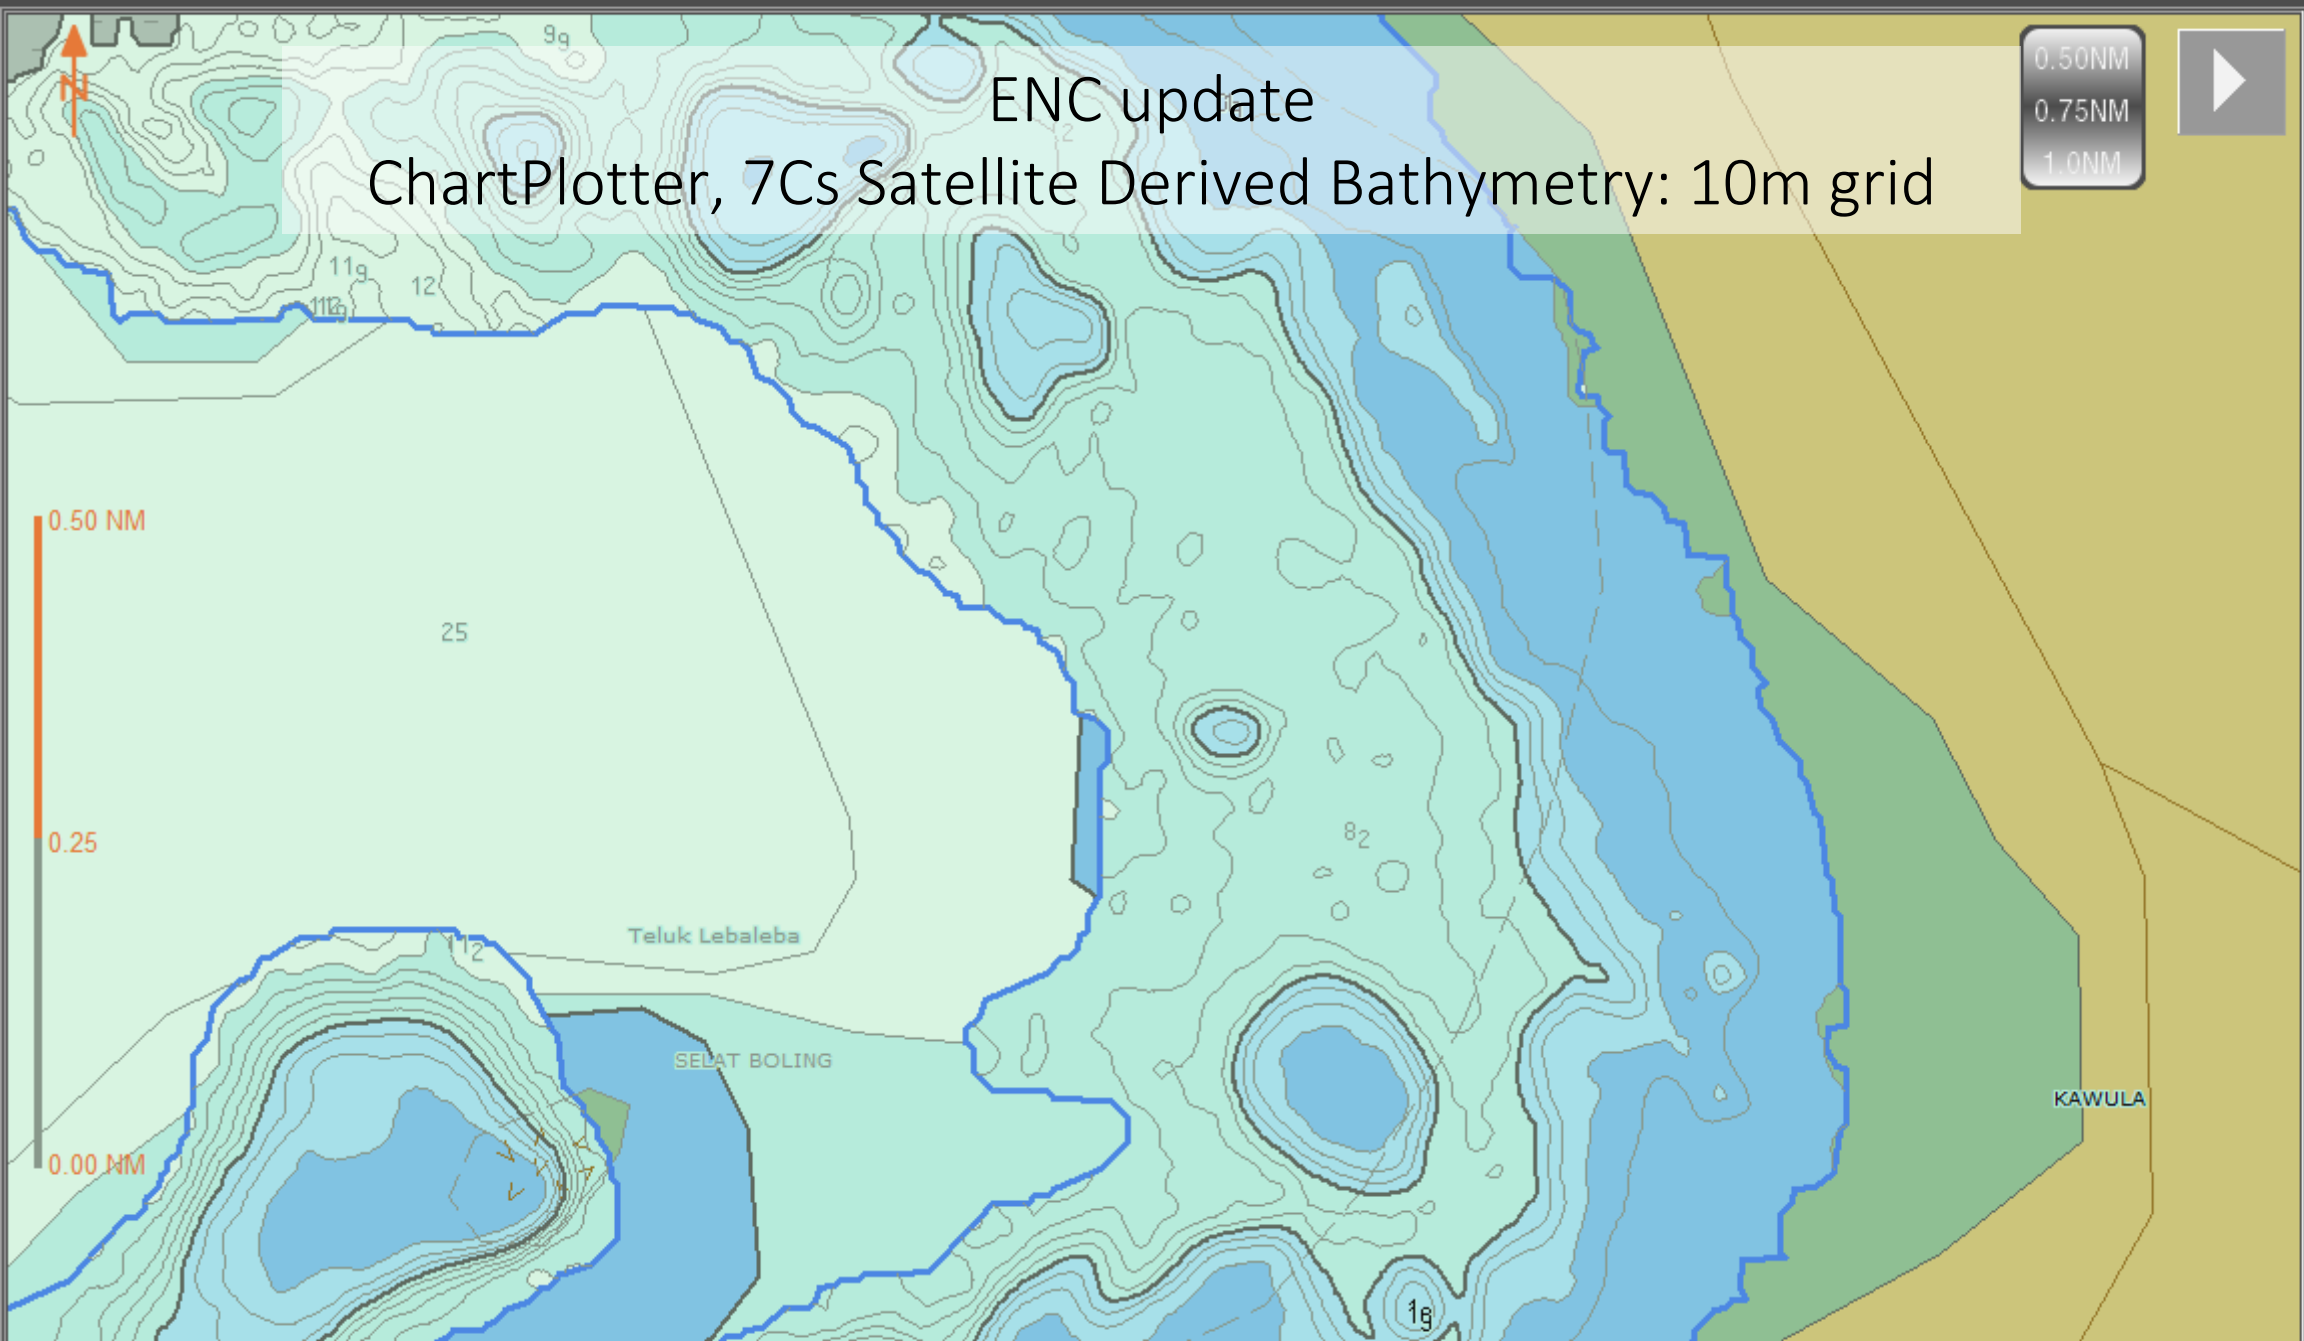

ENC update  
ChartPlotter, 7Cs Satellite Derived Bathymetry: 10m grid

0.50NM  
0.75NM  
1.0NM

-  Ship Setup
-  Sailing Mode
-  Planning Mode
-  Chart Loader
-  View Alerts
-  Profiles

9	Bathymetry 5069331938	freshENC: Ready to use Electronical Nautical Charts (ENCs) based on Satellite Derived Bathymetry	Shipping Companies and Hydrographic Offices	EOMAP GmbH & Co. KG, ChartWorld, SevenCs	Germany
---	--------------------------	---	--	--	---------

Use Case  
Innovative seastate data

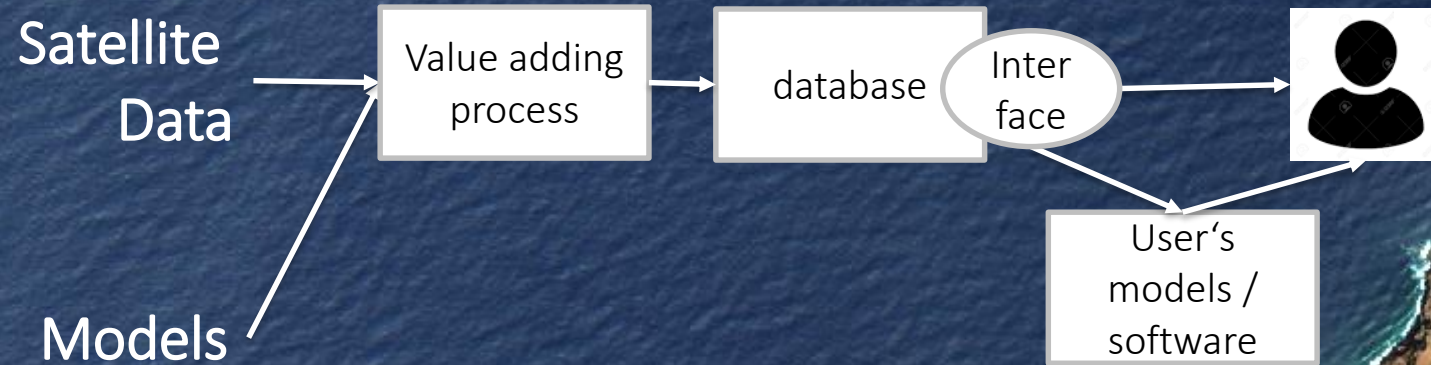

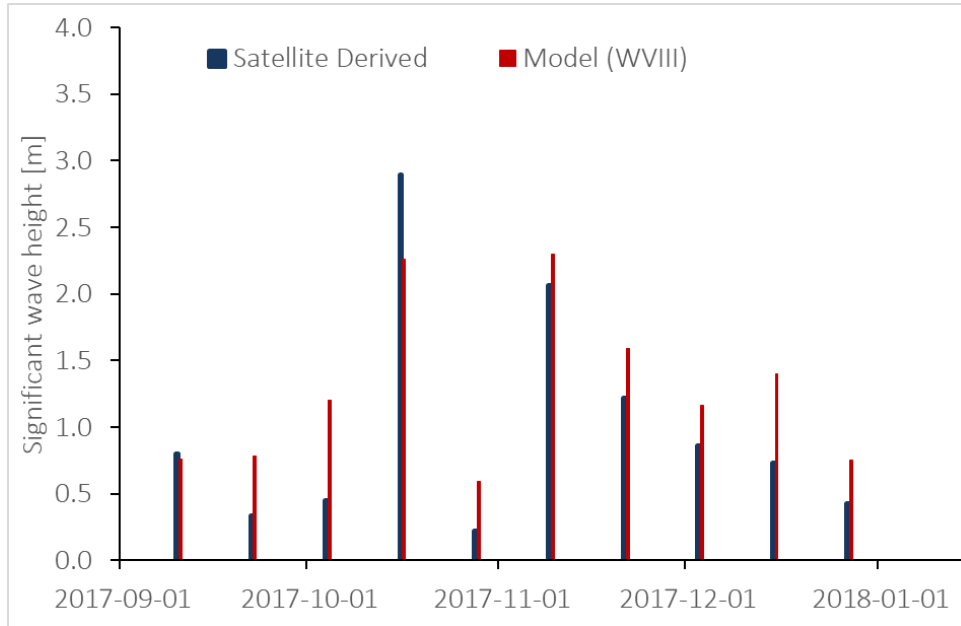

# Innovative seastate data

- High resolution nearshore hindcast information on wave and wind using satellite data (optical and radar) in combination with seastate models

→ 'Measured' information on wave (and wind) statistics for coastal areas worldwide → Rapid site characterization and data source to improve local hydrodynamic models

## Time Series

© DLR, 2018

## Coastal seastate statistics

# Summary

## MARSAT

- developed new ways to make use of modern satellite capabilities in the maritime industry
- created new information to support maritime industry
- Integrated information and data flows in user's workflows/applications
